

KAMBYS COLLECTION

The name Kambys comes from Cambyses which was the name of Cyrus The Great's son and successor. The first letter has been changed to match the first letter of the other collection : Kuros and Klepcys. The 'K' stands for King, a reminder of Cyrus The Great. Cyrus has dared to launch a timepiece with manual twin-barrel winding and a seven-day power reserve. The movement (290 components, 50 jewels) is a 100% in-house manufacture movement, created under the aegis of renowned, award-winning Swiss watchmaker Jean-François Mojon. The design of the watch is not round like most watches, but instead the tonneau-shaped (with a 50 mm diameter, including the crowns) modified to fit most wrists. This timepiece features three different functions. The eye-catching power reserve (between 2 and 4 o'clock) will captivate you with its three barrels sliding progressively along a vertical axis as the seven days unfold... Each barrel has a power reserve of two days, apart from the final barrel (three days). The seconds function is truly original and technically advanced, with its three bevelled hands, each of which counts 20 seconds before passing the baton to the next hand. Then there is the secret animation (between 9 and 12 o'clock), which is activated by simply pressing the crown at 9 o'clock. The text 'limited edition' then appears. Press it again, and the Cyrus coin (the first coin in the history of humanity, produced under the reign of Cyrus the Great) appears to replace the previous inscription. Press one last time and... give flight to your imagination. The Cyrus logo appears, but if you so desire, we can personalize this animation according to your wishes. The design of the bracelet has also been carefully thought out. A perfect continuation of the curve of the timepiece, the strap also has at its centre an opening, at the heart of which there are three barrels in a mechanism which recalls the 'abacus' design of the power reserve.

Collection	Kambys
Reference	529.002.C
Limited series	188 watches
Description	Manually wound Hours, minutes, seconds
Materials	5N gold Black DLC-coated titanium

Movement

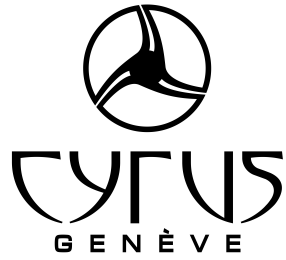

Movement	CAL 7778 proprietary movement Manually wound Developed with Jean-François Mojon
Frequency	3Hz (21,600 v/h)
Power reserve	168h, Three cylinders in anodized aluminium slide along a vertical shaft from 1 to 5 o'clock The first two cylinders represent two days of power reserve The last cylinder represents three days of power reserve
Jewels	50
